

**AIA**  
Seattle

- Clearly establish a relationship between transit, urban development and associated density, contributing to overall sustainability.
- Provide structure for establishing accessibility, legibility and wayfinding in the downtown core.
- Enhance and encourage business.
- Provide a process to evaluate actual realistic physical alternatives and assess their issues and opportunities related to future growth.

**Communities worldwide have successfully implemented urban design frameworks**

Seattle is not alone in contemplating this process. Other communities that have successfully produced or included in their coordinated planning processes a physical or urban design framework include Austin, Charlotte, Cincinnati, New York, North Miami Beach, Philadelphia, Portland, San Francisco, Toronto, Vancouver, Auckland and many others. The impact has been more than aesthetic: *Wall Street Journal's 2009 Market Watch: Best Cities for Business Top 10 Cities* all have downtown urban design plans, design guidelines, preservation guidelines and a robust design review process.

Thank you for your work on these and other critical design issues impacting the future of our city. AIA Seattle strives to provide a strong voice for quality design and the built environment in Seattle and across the Puget Sound region. As architects and design professionals committed to forward-thinking design and comprehensive visioning processes, our organization and its members would be pleased to offer our leadership and support to an effort to develop a forward-thinking urban design framework for downtown Seattle.

Regards,

Lisa Richmond  
Executive Director
