915 North Broadway, Everett, WA

9:30 am

Arrival

9:45 am

Orientation

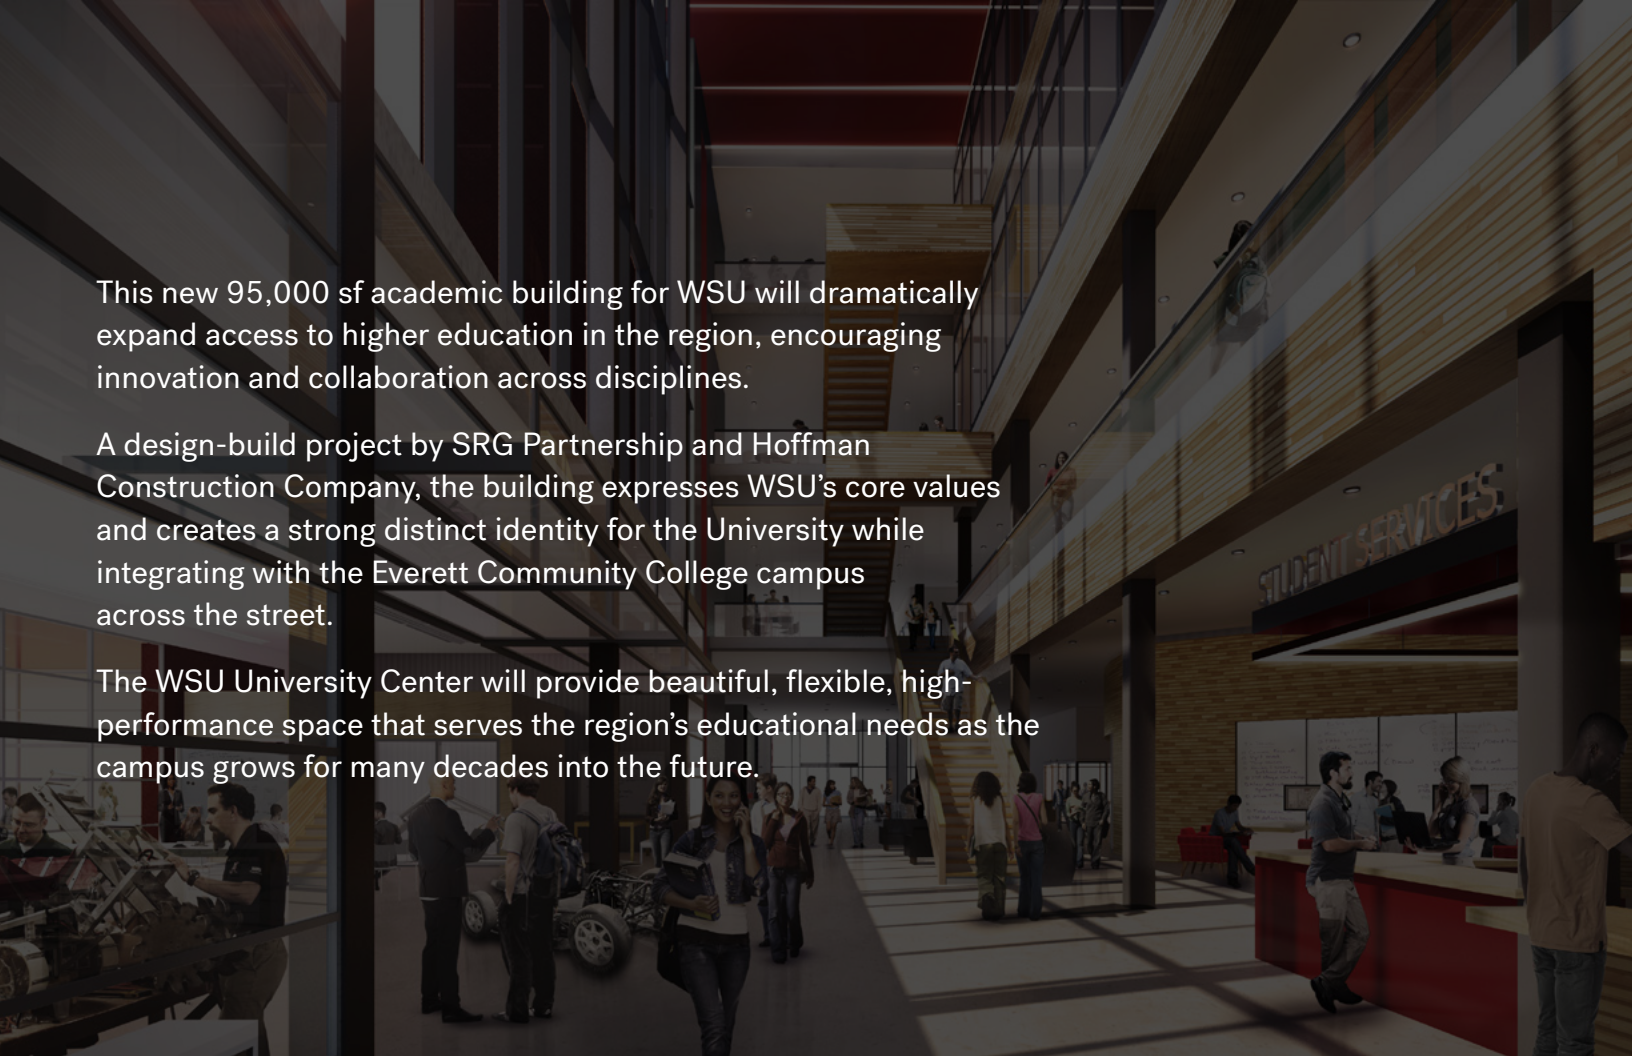

10:00 am

Tour

11:00 am

Conclusion

An architectural rendering of a modern academic building's interior. The space is a multi-level atrium with a central staircase. The architecture features clean lines, large windows, and a mix of materials including wood and metal. People are shown walking, talking, and working, giving a sense of activity and community. On the right, a service counter is labeled 'STUDENT SERVICES'.

This new 95,000 sf academic building for WSU will dramatically expand access to higher education in the region, encouraging innovation and collaboration across disciplines.

A design-build project by SRG Partnership and Hoffman Construction Company, the building expresses WSU's core values and creates a strong distinct identity for the University while integrating with the Everett Community College campus across the street.

The WSU University Center will provide beautiful, flexible, high-performance space that serves the region's educational needs as the campus grows for many decades into the future.
